Profile

Final year Computer Science Engineering student (CGPA 9.32) with strong foundation in Data Structures, Algorithms, Object-Oriented Programming and system-level programming. Proficient in C++, Java and Python with hands-on experience building compiler components and backend-oriented applications. Actively seeking Software Engineering Intern roles focused on scalable systems and problem solving.

Skills

Programming Languages

Python-Primary, Java, C++, C, JavaScript, PHP

Databases & Tools

MySQL, GitHub, Linux, VS Code

Artificial Intelligence & Machine Learning

Basics of AI/ML algorithms including K-Means, Naïve Bayes, and CNNs.

Data Structures and Algorithms

Solved 120+ LeetCode problems with strong focus on Arrays, Strings, Hash Tables, Trees, Binary Search, Recursion and foundational Dynamic Programming.

Web Development

- **Technologies:** HTML, CSS, JavaScript, PHP
- **Frameworks & Libraries:** React and MongoDB

Education

Dehradun, India	Bachelor of Technology <i>Graphic Era Deemed To Be University</i> 9.32 GPA/CGPA, Expected May 2026
Vijayawada, India	Higher Secondary Education <i>Sri Chaitanya Junior College</i> 9.56 GPA/CGPA in MPC Stream
Vijayawada, India	Secondary Education <i>Narayana EM School</i> 10 GPA/CGPA

Projects

Mini Lexical Analyzer

GitHub: github.com/assk2005/MiniLexcialAnalyzer_for_CPP 🔗

- Designed and implemented a compiler-style lexical analyzer using Deterministic Finite Automata (DFA) to tokenize C++ source code.
- Eliminated comments, whitespace and preprocessor directives to generate a pure token stream.
- Processes keywords, identifiers, literals, operators and symbols with linear time complexity.
- Strengthened understanding of compiler front-end design, tokenization and automata theory.

Shopping Mart Management

- Developed a retail management system supporting inventory tracking and billing workflows.
- Implemented core business logic for product management and transaction handling using Python (Tkinter).

Spam Email Detection

- Applied text preprocessing and feature extraction pipelines for classification.

Gender and Age Detection

- Developed a deep learning-based model for gender and age detection using facial images from the UTKFace dataset.
- Implemented CNNs with TensorFlow/Keras for feature extraction and classification, achieving accurate predictions for both real-time and static images.

Internship

Salesforce Virtual Internship — Remote | 8 Weeks(May 2025 - July 2025)

- Built and configured cloud-based CRM workflows simulating real-world business use cases.
- Developed mini-projects involving backend logic and data handling.
- Gained hands-on experience with enterprise software development practices.

Certificates

- Amazon Skill Builder — GenAI and Machine Learning fundamentals
- Salesforce Developer Champion Program (SmartBridge & AICTE) - 2025

Languages

- English
- Hindi
- Telugu
